We FEMA does not have the resource on hand to meet this mission.

However, PRNG-MSC and 4SB do have tankers they could move to meet this requirement. I will address this TF directly this afternoon to see how quickly they can move potable water tank onsite

Do we know how many persons this is to support? For how long? What's the coordinates to the location? EPA looks like there are two specific clean up sites in Dorado,

One is right off Route 22 and the other is Route 2 and a third in Toa Baja on the Municipality border.

In addition, PRASA water is functional in most of the area, in two day intervals.

There is an OASIS in Dorado located at OMME office with 6,000 gal capacity and they have two other public dispensing sites feed by the fire hydrants with points of distribution

Dorado: population is 37,0000 if I follow the EPA 1 mile radius around each site it is listed as approximately 4500 personal control of the c

This loss is continuing to that we need to lose down and secure: do some down and secure the site. However, this is a supply source that would be cut off and critical needs. We understand the area is the be energized within days, and water restored shortly thereafter, but our request for a water source there would be replace to the continuing to that we need to lose down and secure:

We are still requesting a source to be placed at that location, again, replace what we are working to take away.

We have arranged through FBI to deliver pallets of water there on Monday, but are looking for a better solution until water is restorated.

Javier,
Please work with log to ensure potable water is accessible to the area discussed below

Please see the message string below

Our teams have observed people drawing (contaminated) water for drinking from a Superfund site. EPA is preparing warning signs to post there, but we are also asking for a water supply to be placed there.

Clearly this is a significant concern. We are trying to have signs made up for posting; the REOC received the language to be on these signs Carl/Steve: Is it possible to run this to FEMA/National Guard for a water truck to be placed there?

Our Team 2 was provided some additional information on other well locations at the Dorado NPL site. During their assessments they stopped by one of these locations. Citizens are bringing containers to drink from the wells. The fencing is not secure. I would think this needs immediate attention from the RPM but I will leave that to Incident Command and CEPD management as it is outside the scope of our assigned work.

I will provide some more details and photos later.

Team 1 finished inspecting the wells at Hornigas Groundwater Contamination NPL Site. There are three wells. The wells are covered and secured with locks. The locks have not been compromised. There is a water line near the wells and a neighbor informed Weston that he took about 10 gallons of water from the water line which is supplied from a main water supply. Photos for both responses pending.

Team 1 consists of Don McLaughlin (OSC), Silvia Palomo (CIC), and Guillermo Lopez (Weston) with two CID escorts Team 2 consists of Aarti Reddy (OSC), Wanda Ayala (CIC), and Hector Rodriguez (Weston) with two CID escorts

Buenos Dias:

Team 2 investigated the Dorado Groundwater Contamination NPL Site. There were not people or trucks accessing the wells. However, the gate is not secured and a pump pipe was misting. There were police in the area but they were blocking traffic for trucks cleaning the road. We will have photos later when reception is better to forward from the field.

Buenas Noches:

Please see the email below. Our teams will be visiting two CEPD NPL sites tomorrow for recon. Any assistance regarding these sites would be appreciated. We are just putting eyes on the situation since people are accessing your wells. We plan on leaving the Water Beach Club Hotel in Carolina at 8:30 AM if anyone is able to join our teams. If not, any information would be beneficial. Gracias

There are reports that people are accessing the wells at groundwater NPL sites. Please send teams to investigate these reports. Exercise caution at these locations and it is not advised to interfere with people. Just need to get some eyes on the wells associated with the Site.
